Practice: Area and Perimeter (trades math)

Name: _____ Date: _____

Answer with units.

1. A floor is 4 ft by 2 ft. What is its area?

   Answer: _____

2. A floor is 5 ft by 3 ft. What is its perimeter?

   Answer: _____

3. A floor is 5 ft by 5 ft. What is its area?

   Answer: _____

4. A floor is 8 ft by 4 ft. What is its perimeter?

   Answer: _____

5. A floor is 9 ft by 6 ft. What is its area?

   Answer: _____

Answer key (for the adult)

Pattern: calculates perimeter for area and area for perimeter.
The learner swaps the two formulas, using 2 times length plus width for area and length times width for perimeter. That matches the answers in Problems 1, 3 and 5 and in Problem 2. Problems 4 and 6 show the learner can use the perimeter formula correctly, so the work is on choosing the right formula.

---

1. A floor is 4 ft by 2 ft. What is its area?

Answer: 8 sq ft

If you see 12 ft, that is the habit again.

checked by an independent solve

2. A floor is 5 ft by 3 ft. What is its perimeter?

Answer: 16 ft

If you see 15 sq ft, that is the habit again.

checked by an independent solve

3. A floor is 5 ft by 5 ft. What is its area?

Answer: 25 square feet

If you see 20 ft, that is the habit again.

first draft said 25 sq ft; the check caught it and corrected the key

4. A floor is 8 ft by 4 ft. What is its perimeter?

Answer: 24 ft

If you see 32 sq ft, that is the habit again.

checked by an independent solve

5. A floor is 9 ft by 6 ft. What is its area?

Answer: 54 sq ft

If you see 30 ft, that is the habit again.

checked by an independent solve

AI can make mistakes. Every answer above was solved twice by separate model calls; anything marked NOT verified needs your eye.
