Practice: Solving Linear Equations

Name: _____ Date: _____

Solve for x.

1. $x + 3 = 8$ _____

2. $x - 4 = 6$ _____

3. $x + 9 = 4$ _____

4. $2x + 5 = 13$ _____

5. $3x - 6 = 15$ _____

Answer key (for the adult)

Pattern: keeps a term's sign when moving it across the equals sign.
The learner keeps the constant's sign when moving it to the other side instead of using the inverse operation. This gives 9-4 in problem 2, 20+5 in problem 3, 10-6 in problem 4, and 0-15 in problem 6, each matching the written answer. Problems 1 and 5 are simple one-step x-plus-constant cases where the learner did subtract correctly, showing the correct move is known but not used consistently.

---

1. x + 3 = 8

Answer: x = 5

If you see x = 11, that is the habit again.

checked by an independent solve

2. x - 4 = 6

Answer: x = 10

If you see x = 2, that is the habit again.

checked by an independent solve

3. x + 9 = 4

Answer: x = -5

If you see x = 13, that is the habit again.

checked by an independent solve

4. 2x + 5 = 13

Answer: x = 4

If you see x = 9, that is the habit again.

checked by an independent solve

5. 3x - 6 = 15

Answer: x = 7

If you see x = 3, that is the habit again.

checked by an independent solve

AI can make mistakes. Every answer above was solved twice by separate model calls; anything marked NOT verified needs your eye.
